

CHANGE REQUEST LOG

Project Name	El-Kapitan Plagiarism Detection System	Date	April 22, 2026
Project Number	COSC-4P02 Group 7	Document Number	CRL-001
Project Manager	Mehrbod Mehrabi	Project Owner/Client	Prof. Dave Bockus

Change Request Number	Date Received	Requestor	Change Request Name and Description	If Approved, Approved By	Implementation Due Date, if Applicable	Requirement Or WBS Number, if Applicable	Status
CR-001	Apr. 19, 2026	Project Team	Student submission workflow changed from authenticated student dashboard to public assignment-key submission form. Final code uses submit with assignment key, first name, last name, email, and ZIP upload instead of student login and assignment selection from a dashboard.	TBD / Instructor	N/A - implemented in final code	SRS 3.1; SRS 5.1 Student Dashboard; REQ-2	Implemented design change
CR-002	Apr. 19, 2026	Project Team	Student submission status/history interface removed from final scope. Students receive only upload success feedback and do not have a page showing previous submissions, queued/analyzing/completed states, or history.	TBD / Instructor	Deferred	SRS 5.1 Submission Status and History	Not implemented
CR-003	Apr. 19, 2026	Project Team	Privacy acknowledgement before final submission was not implemented. The SRS required an explicit student acknowledgement that submissions are anonymized and protected before upload finalization.	TBD / Instructor	Deferred	REQ-5; SRS 5.1 Assignment Submission Interface	Not implemented
CR-004	Apr. 19, 2026	Project Team	Client-side submission validation narrowed to file type validation. ZIP upload is enforced for the student flow, but the SRS maximum file-size validation requirement is not present in the final frontend.	TBD / Instructor	Deferred	REQ-1; REQ-3	Partially implemented
CR-005	Apr. 19, 2026	Project Team	Similarity analysis trigger changed. The SRS described analysis after upload or instructor re-analysis; final code stores student uploads and relies on the instructor to manually click Generate Result for a selected repository.	TBD / Instructor	N/A - implemented in final code	SRS 3.2.2; REQ-6; REQ-10	Implemented design change
CR-006	Apr. 19, 2026	Project Team	Instructor course and assignment-run management expanded in the final UI. Instructors can create courses, create/edit/delete assignment runs, set language, due date, top K, threshold, copy assignment keys, and upload repositories.	TBD / Instructor	N/A - implemented in final code	SRS 5.1 Instructor Dashboard; Assignment Configuration	Added / implemented

CR-007	Apr. 19, 2026	Project Team	Historical repository handling implemented as named course repository uploads for assignment runs. The final flow supports repository upload and comparison selection, but does not implement a separate previous-course-offerings archive model as described in the SRS.	TBD / Instructor	Partially complete	REQ-8; SRS 2.5; SRS 5.1 Assignment Configuration	Partially implemented
CR-008	Apr. 19, 2026	Project Team	Assignment specific exclusion code was removed from final functionality. The backend ignores selected token categories through Ignore.txt, but instructors cannot define starter code exclusions per assignment.	TBD / Instructor	Deferred	REQ-9; SRS 2.5	Not implemented
CR-009	Apr. 19, 2026	Project Team	Frontend data access changed from API-only access to direct Supabase table and storage queries for instructor dashboard, review queue, report, comparison, and export data. This differs from the SRS requirement that direct database access from the client be prohibited.	TBD / Instructor	N/A - implemented in final code	SRS 5.2; SRS 6.3.2	Implemented design deviation
CR-010	Apr. 19, 2026	Project Team	Instructor review status is calculated from similarity score rather than manually saved. The final code shows Clear, Needs Review, or Flagged based on score, but does not persist instructor notes, reviewed status, or manual flagged status.	TBD / Instructor	Deferred	REQ-15; SRS 5.1 Review and Notes Interface	Partially implemented
CR-011	Apr. 19, 2026	Project Team	Side-by-side comparison interface implemented with file selectors, line numbers, and highlighted shared regions, but final code does not fully implement synchronized scrolling and does not consistently use stored backend match sections in the rendered comparison.	TBD / Instructor	Partially complete	REQ-12; REQ-13; REQ-14; SRS 5.1 Side-by-Side Comparison	Partially implemented
CR-012	Apr. 19, 2026	Project Team	Assignment export format simplified. Final export creates per-submission ZIP files and summary.csv, but does not fully include student ID mapping, explicit flagged status, public/anonymized ID mapping, or the original submitted ZIP structure required by the SRS.	TBD / Instructor	Partially complete	REQ-16 to REQ-21; SRS 3.4	Partially implemented
CR-013	Apr. 19, 2026	Project Team	Submitted ZIP retention changed. The backend extracts and concatenates source code into a processed file for storage and analysis rather than preserving the original student ZIP exactly as uploaded.	TBD / Instructor	N/A - implemented in final code	REQ-17; SRS 3.4; SRS 4.3	Implemented design deviation
CR-014	Apr. 19, 2026	Project Team	Administrator role and administrator maintenance interfaces were not implemented. Final protected routes only require an authenticated instructor-style Supabase user.	TBD / Instructor	Deferred	SRS 2.2; SRS 5.1 Admin; SRS 6.3.1	Not implemented
CR-015	Apr. 19, 2026	Project Team	Email notification service for instructors was not implemented in the final code.	TBD / Instructor	Deferred	SRS 5.4 Communications Interfaces	Not implemented
CR-016	Apr. 19, 2026	Project Team	Internationalization and localization support deferred. The final UI is English-only and does not include translation files or an i18n framework, although standard browser date formatting is used in some places.	TBD / Instructor	Deferred	SRS 7.1 to 7.4	Not implemented / low priority

CR-017	Apr. 19, 2026	Project Team	Student identity protection strengthened beyond the basic SRS wording. The backend generates a public HMAC ID and encrypts first name, last name, and email before storing submission identity fields.	TBD / Instructor	N/A - implemented in final code	REQ-4; SRS 6.3.3	Implemented enhancement
CR-018	Apr. 21, 2026	Project Team	Initial design focused primarily on Java source file analysis. Final implementation expanded tokenizer support to include Java, C, and C++ source files using ANTLR-generated lexers, allowing plagiarism detection across multiple supported programming languages through a unified Java-based analysis engine.	TBD / Instructor	N/A - implemented in final code	REQ-6; SRS 2.5 Source Language Support	Implemented enhancement
CR-019	Apr. 21, 2026	Project Team	Similarity analysis originally compared raw token text values, which produced false positives and sensitivity to identifier naming. Final implementation changed k-gram hashing to prioritize token identifiers/types rather than raw token text, improving plagiarism detection against variable renaming and superficial code modifications.	TBD / Instructor	N/A - implemented in final code	REQ-9; SRS 3.2.2 Similarity Detection Logic	Implemented design improvement
CR-020	Apr. 21, 2026	Project Team	Initial plagiarism matching used simple overlapping match merging, which produced duplicate regions and inaccurate plagiarism boundaries. Final implementation replaced overlap-based merging with sequential diagonal matching of hashed k-grams, allowing accurate detection of continuous copied code blocks and significantly reducing fragmented match reports.	TBD / Instructor	N/A - implemented in final code	REQ-12; REQ-13; SRS 5.1 Side-by-Side Comparison	Implemented design improvement
CR-021	Apr. 21, 2026	Project Team	Repeated overlapping k-gram matches generated duplicate and nested plagiarism regions in final reports. A filtering stage was added to remove smaller matches fully contained inside larger matching regions, improving readability and reducing clutter in plagiarism comparison output.	TBD / Instructor	N/A - implemented in final code	REQ-14; SRS 5.1 Comparison Results	Implemented enhancement
CR-022	Apr. 21, 2026	Project Team	To reduce false positives from common starter code and boilerplate structures, final implementation added Ignore.txt support for configurable token exclusion during tokenization. This allows selected token categories to be ignored during analysis without modifying lexer logic.	TBD / Instructor	N/A - implemented in final code	REQ-9; SRS 2.5 Token Exclusion Rules	Implemented enhancement
